Exam Feedback

EE3-17: Communication Networks

Q1) Most students attempted and answered correctly part a) of this question. Student where less consistent in their answer to part b). Answers were very uneven in terms of their accuracy. This was mainly due to the quality of description and discussions in their answers.

Q2) most of the students attempted and successfully answered part a). The quality of derivation and explanation was less satisfactory in part b) of the question. Part b) was a direct extension of a model introduced during lectures. The main difference was the context problem where the model needed to be applied. Some few student did not attempt this part of the question.

Q3) All students attempted and answered correctly part a) and part b). Most of the marks deduction came from part b) ii) which is an extension of material introduced during lectures.

Q4) This question was attempted and answered by most students. Part a) is about background knowledge in the form of proper explanation and discussion of standards and associated mechanisms. Discussions in part b) are related to a broader (than introduced in class) scope of knowledge related to communication standards.

Overall the exam marks are as expected and averages follow historical trends. Even though Q1 and Q2 attained lower averages than Q3 and Q4, those averages where consistently brought down by few students not attempting parts of Q1 b) and Q2 b).
